

HarmonYouth Foundation Website — Guide & Handoff Notes

The redesign, built for real. Everything about how the site works and how to update it yourself.

Repo: github.com/Wu-Adam1234/HarmonYouth-Foundation **Contact on site:** harmonyouthfoundation@gmail.com · (403) 926-6122 · Instagram [@harmonyouthfoundation](#) **Slogan:** "We play music. We build devices. We show up for people." — in the footer of every page.

⚠ **START WITH SECTION 9.** A legal audit in September 2026 found 17 issues. The privacy policy has been rewritten to close all of them, and it now describes three things the forms do not do yet. **Section 9.2 has the exact markup** — it has to ship in the same upload as the new `privacy.html` .

Where the files are on this Mac - Working folder: `~/Documents/harmonyouth-website/` — edit here - Zipped copy: `~/Documents/harmonyouth-website.zip` — 34MB, 126 files, for backup or sharing

The zip is a snapshot, not the working copy. If you edit the folder, re-zip it (right-click the folder → Compress) or the zip goes stale. **You cannot upload the zip to GitHub and have it unpack** — GitHub stores it as a single file. To publish, upload the *contents* of the folder. The zip is for keeping a backup and for emailing the whole site to someone.

0. What this is

This is **path 2 from section 13 of the old guide: the full rebuild**. The Claude Design mockups (`.dc.html` files) were prototypes that only ran inside that tool's runtime. This is the same design rebuilt as plain HTML, CSS and JavaScript that runs anywhere — no frameworks, no build step, no npm. You can edit any file in a text editor, re-upload it, and it works.

It also fills the five gaps the mockups left open, using the content from the old live site:

Gap in the mockups	How it's covered now
No Team page	<code>team.html</code> — Adam, Hanry and Arthur's full bios, plus Vienna Lu on marketing and outreach
No Build meets page	<code>build-meets.html</code> — schedule with List/Calendar toggle, what to expect
Forms were <code>mailto:</code> links	Three real Formspree forms on <code>get-involved.html</code> , with the parent-email confirmation check and the full-panel confirmation screens
No calendar views	Both <code>performances.html</code> and <code>build-meets.html</code> have the List/Calendar toggle back
No WeChat / offline donation route	WeChat and GoFundMe QR codes on both <code>donate.html</code> and <code>get-involved.html</code>

1. The pages

Page	File	What's on it
Home	<code>index.html</code>	Scroll-driven hero, stat strip, "How a show runs" 01/02/03, Programs accordion, piano spotlight illustration, next/last shows, three photo carousels, FAQ accordion, donate block
Mission	<code>mission.html</code>	Why the org exists, three principles, the three founders in brief, "what we measure" stats
Programs	<code>programs.html</code>	Program 01 (music) and Program 02 (Build) in full, the 00:00→00:35 set timeline, practical-questions accordion
Performances	<code>performances.html</code>	The next two shows as detail cards, full schedule with List/Calendar toggle, every show played, the four venues, booking panel
Photos	<code>photos.html</code>	Eleven card carousels — every past performance — with a full-screen lightbox
Build meets	<code>build-meets.html</code>	Upcoming meets (list + calendar), how a build meeting runs
Meet the team	<code>team.html</code>	Adam's, Henry's and Arthur's bios, then Vienna Lu (Marketing and Outreach Lead)
Get involved	<code>get-involved.html</code>	Three jump cards, the three Formsprees forms, volunteer hours + service letter panels, FAQ, QR codes
Donate	<code>donate.html</code>	Where the money goes, the 100% callout, GoFundMe widget, QR codes, other ways to help
Privacy policy	<code>privacy.html</code>	Fifteen numbered sections — rewritten Sept 2 2026 against the legal audit (section 9)
404	<code>404.html</code>	Piano-themed not-found page with a working search and a playable octave

Shared by all of them: `styles.css` , `site.js` , `harmonyouth-logo.png` , and the photos.

Every page has the same header (logo, light/dark switch, Menu button) and the same footer. The Menu dropdown is the only navigation — there is no nav bar.

2. How to update the live site

1. Go to the repo on GitHub
2. Click **Add file → Upload files**
3. Drag in the changed files (or all of them — overwriting is fine)
4. Scroll down, click **Commit changes**
5. Wait ~1 minute, then **hard-refresh** the live page (Cmd+Shift+R / Ctrl+Shift+R)

On the first upload of this rebuild, also delete the old site's leftover files from the repo, or they will sit there unreachable: `script.js` , the old `styles.css` is overwritten but `making.html` (if still present) and the `assets/` folder holding `piano-`

film.mp4 / piano-film.webm are no longer used by any page. The redesign has no scroll-scrubbed film section — the hero replaced it.

If a change doesn't appear, it's almost always the browser cache, not a broken upload. styles.css and site.js are linked as styles.css?v=2 and site.js?v=2 in every page. If you change either file and people still see the old version, bump that number to ?v=3 everywhere (find-and-replace across the .html files). That forces every browser to re-download it.

3. Common edits

Add or change a performance

Two places, and they must agree.

1. The list row in performances.html, inside <div class="panel" data-view="list"> :

```
<div class="show-row">
  <div class="show-date">Sep 12</div>
  <div class="show-venue">
    <span class="name"><a href="MAPS_LINK" target="_blank" rel="noopener" class="venue-link">Venue Name</a>
  </span>
    <span class="sub">2:00 to 2:30 PM</span>
  </div>
  <div class="show-status">Recruiting</div>
</div>
```

Keep rows in date order. Status options — this is the class on the last div plus its text: - <div class="show-status">Recruiting</div> — default - <div class="show-status full">Full</div> — greyed out - <div class="show-status talks">In talks</div> — lighter gold - <div class="show-status past">Played</div>

2. The calendar entry in site.js. Search for SCHEDULE DATA near the top:

```
'2026-09-12': [['SG', 'recruiting', '2:00 to 2:30 PM']],
```

Format is 'YYYY-MM-DD': [['VENUE_CODE', 'status', 'time']]. Two shows on one day go in the same array. Venue codes come from the venues object just above — add a new venue there first or the chip renders blank. Valid statuses: recruiting, full, talks, past, cancelled.

Months are 0-indexed, so m: 7 is August and m: 9 is October. min and max are how far back and forward people can page; start is the month it opens on. **If you add a show past max, bump max or nobody can page to it.**

Move a show from upcoming to past

1. Move its row down into the "Every show so far" panel in performances.html, and change the status cell to a Photos link
2. Change its calendar status in site.js to 'past'

3. Add a gallery on `photos.html` (below)

Add a photo gallery

1. **Resize the photos first** — phone photos are 5–10MB each and will make the page painfully slow. Aim for ~1600px wide, JPG, quality ~80.
2. Name them consistently: `venue-date-1.jpg` , `venue-date-2.jpg` (e.g. `scenicgrande-sep6-1.jpg`)
3. Upload them to the repo
4. In `photos.html` , copy an existing `<div class="carousel-block">` and swap the filenames

Each card looks like this:

```
<button type="button" class="car-card" data-card
      data-cat="Venue · Sep 6" data-title="Short caption"
      data-body="The longer caption shown in the lightbox.">
  
</button>
```

Use `data-src` , not `src` . That's what makes photos load lazily — `site.js` only downloads them when the carousel scrolls near the viewport, which is what keeps the page fast with ten galleries on it. `data-title` and `data-body` are what the lightbox shows when someone taps the card.

Cards themselves carry no visible caption or dark veil anymore — as of the September 2026 pass, every card is just the clean photo (see "Build decisions worth knowing," section 8). Still fill in `data-cat` , `data-title` and `data-body` on every card — they're what the full-screen lightbox shows when someone taps it, they just don't render on the card face itself.

Give the carousel block an `id` (e.g. `id="the-scenic-grande-sep-6"`) so `performances.html` can link straight to it.

Newest gallery goes at the top.

Add or change a build meet

Same two places, in `build-meets.html` (the list row) and `site.js` → `BUILD_MEET_CALENDAR` . The default status text there is **Spots open** rather than Recruiting — that wording comes from the `labels` object on that calendar.

Both Prev and Next are greyed out right now because `min` and `max` are both September 2026 — one meet, one month. That's intentional, not broken. Add an October meet and bump `max` to `{ y: 2026, m: 9 }` .

Two spots still say "Location to be confirmed": the `.sub` line in the list row, and the `BM` entry in `BUILD_MEET_CALENDAR.venues` . Both need updating when you have an address.

Change the volunteer hour wording

The claim appears in **seven** places and they have to stay consistent. Two things must match everywhere: **four hours** is a total across both programs, not four hours of performing, and **service letters are available on request**.

Where	File
Menu dropdown (on all 11 pages)	the <code>menu-note</code> block in every <code>.html</code> file
Homepage stat strip	<code>index.html</code> → "Hours per certificate"
Homepage FAQ answer 03	<code>index.html</code>
Performer form badge	<code>get-involved.html</code> → <code>.perk</code> in <code>#perform</code>
Maker form badge	<code>get-involved.html</code> → <code>.perk</code> in <code>#build</code>
Volunteer hours panel	<code>get-involved.html</code>
Under the schedule	<code>performances.html</code> and <code>build-meets.html</code>

If you change the number or the rule, change all of them.

Change a team bio or photo

Bios live in `team.html`, one `<section class="founder">` each.

Crop before you upload. The photo box is portrait, roughly **0.63 wide-to-tall** (e.g. 880 × 1384). `object-fit: cover` fills the box and trims the rest, so a landscape photo gets chopped hard on both sides. Around 880px wide at JPEG quality 85 keeps files near 200KB — `hanry-cofounder.jpg` is currently 2MB, which is far larger than it needs to be.

If the face sits off-centre, nudge it with `style="object-position:center 20%;"` on the `<img>` rather than re-cropping. Adam's uses `center 62%`, Henry's `62% 8%`, Arthur's `center 30%`.

Photos of members under 18 need a signed release before they go up, same as resident photos.

Add a page to the menu

The menu block is **repeated in all 11 files** — that's the cost of having no build step. Add your `<a class="navlink">` row to each one, and add the page to `ROUTES` at the top of `site.js` so the search can find it.

4. How the forms work

All three forms on Get Involved submit to **Formspree** (free tier) → `harmonyyouthfoundation@gmail.com`.

- Form ID: `xnjkdgge` — set once, as `FORM_ID` near the bottom of `site.js`
- Each form has its own hidden `_subject` field, so the email subject tells you which panel it came from
- Submissions also appear in the Formspree dashboard (`formspree.io`, log in with the org Gmail)
- Free tier has a monthly submission limit

Performer form (`#volunteerForm`) collects name, instrument, area, performer email, parent/guardian email + confirmation, dates, phone. **Maker form (`#makerForm`)** collects name, email, phone, parent/guardian email + confirmation, and free-text details. **Everything-else form (`#helpForm`)** collects name, email, optional parent/guardian email + confirmation, message.

The parent fields here are **optional on purpose** — care home staff, media and partners use this form too, and making it required would stop them submitting.

The parent-email confirmation check is generic. Any input with `data-confirm-for=<id of the first email field>` is checked automatically, and the error appears in the `.fs-error` span next to it. Leaving both blank passes, which is what makes the optional version work. A fourth form needs nothing but that one attribute.

The confirmation screen replaces the whole form in place — no page reload. The wording lives in `SUCCESS_CONTENT` in `site.js`, keyed by form ID. `SHOWS_LINK` and `IG_LINK` are defined once just above it and reused in all three messages, so changing the Instagram handle is a one-line edit. If you add a form and skip its `SUCCESS_CONTENT` entry, it falls back to a plain "Sent!".

If a submission fails, the form stays put and shows a line telling the person to email instead — nothing is silently lost.

Two fields are missing from all three forms and the privacy policy already says they exist: an "Are you under 18?" radio pair and an un-ticked CASL reminder-consent checkbox. **Section 9.2 has the markup, the CSS and the two `site.js` additions.** Until they ship, the age gate does not exist and `#helpForm`'s guardian fields stay optional for everyone, minors included.

Every field you add to a form has to be added to the privacy policy the same day, before the form goes live. That is not a style preference — it is a written commitment in §16 of the policy, and the gap between what a form collects and what the policy discloses is what Alberta PIPA is built to catch. See section 9.5.

5. Design notes

All colours are defined once at the top of `styles.css`, in two blocks: `:root` (dark) and `[data-hy-theme="light"]`.

```
--bg:#07080A;      /* page background */
--accent:#C9A15A;   /* gold – buttons, links, highlights */
--accent-soft:#E8C87A;
--text:#F4F6F8;
--muted:rgba(244,246,248,.60);
--faint:rgba(244,246,248,.52);
```

If you change these, check the contrast. The light-mode gold is `#8A6520` rather than the brighter `#A97C2B` from the mockups, because the brighter one only reached 3.4:1 against the page and 3.8:1 behind white button text — both below the 4.5:1 WCAG AA minimum. Every text/background pairing in both themes currently clears 4.5:1. A lighter gold will fail again.

The hero is a special case: its photo carries a dark scrim in *both* themes, so the hero's own text and the header sitting over it are pinned to light (`#FBFAF7`) regardless of colour mode. That's the `.hero:focus-visible / .site-header.over-hero` block in `styles.css`, plus the `over-hero` class that `site.js` toggles on scroll. Without it, light mode put near-black text on the dark photo at 2.5:1.

The look is **liquid glass**: every button, arrow and toggle is a transparent pill with an inset light-ring shadow stack (`--glass`) plus an SVG displacement filter (`#hy-glass`, defined at the top of each page's body). Fonts are **Inter** for headlines and UI, **Open Sans** for body text.

Light/dark is toggled from the header and saved in the browser under `hy-theme`. It applies to every page.

Interactive pieces, in case you wonder what's moving: - **Hero** — pinned to the top of a 260vh section; scrolling through it expands the photo from a card to full-bleed while the headline splits apart. This is real scrolling; nothing is hijacked, and it degrades to a static hero with "reduce motion" on. - **Menu dropdown** — Escape or a click outside closes it; the two bars morph into an X - **Search** — in the dropdown on every page and in the middle of the 404. The placeholder rotates every 3.4s. Typing a word matches it against `ROUTES` and navigates. - **Fluid cursor** — a soft warm trail; off automatically on touch devices and with reduce-motion - **Carousels** — snapping horizontal rows; photos blur up as they load; arrows disable at each end - **Lightbox** — click any card for the photo, category, headline and caption - **Piano spotlight** — the "Built to keep coming back" CTA band on the homepage. A black-and-white outline of a grand piano (`piano-outline.jpg`) sits under a full-colour version (`piano-color.jpg`); the colour layer is CSS-masked to a circle that follows the cursor, so hovering "lights up" the piano in colour wherever you point. Wired in `initPianoSpotlight()` in `site.js`. Replaces the old "MUSIC FOR EVERYONE" outlined-text headline. - **Accordions** — one row open at a time - **Scroll progress bar** — two-pixel gold bar at the very top - **Dot rail** — right edge of the homepage, highlights the section you're in - **404 piano** — seven keys, one missing. Click them or press A S D F G H J.

Everything above is disabled or simplified when the visitor has "reduce motion" turned on.

6. Things to keep on top of

- **Check the Formspree inbox.** The confirmation screen promises people they're on the roster. If nobody's watching that inbox, that promise breaks.
 - **Get photo consent before posting anyone.** For residents, a staff member or family member typically needs to sign. Care facilities are strict about resident privacy for good reason.
 - **Update statuses after each show.** A page full of "Recruiting" for dates that already passed looks abandoned.
 - **Compress photos before uploading.** The site is ~31MB, almost all photos. Galleries load lazily so the cost lands on people who scroll to them, but it still adds up.
 - **Fill in the build meet location.** Two spots still say "Location to be confirmed."
 - **Answer every under-18 sign-up with a guardian confirmation email, by hand, before adding the student to the roster.** The policy says you do this. There is no server to do it for you — see 9.4-C.
 - **File every signed photo consent form and every guardian confirmation** in the `Consent Records` Drive folder, and keep them five years (9.4-A, 9.4-B).
 - **Copy each `email_reminders_consent` line into the opt-in spreadsheet** — email, date, form. That spreadsheet is your CASL defence (9.4-E).
 - **Review the Consent Records folder every January** and delete anything older than five years.
-

7. Things to confirm before this goes public

These came across from the mockups and are stated as fact on the site:

- [] **The donation claim.** "100% to the hospitals and senior homes we support, HarmonYouth takes none" appears on the homepage, `donate.html`, and twice on `mission.html`. No hospital is named by name anywhere on the site — that was deliberate; keep it that way unless you have permission to name one. **If the arrangement is ever anything other than 100%, all four places have to change together.**

- [x] **The privacy policy** was rewritten on September 2, 2026 against the legal vulnerability audit — all 17 issues addressed across `privacy.html` (15 sections) and the PDF (16 sections). See section 9. **It is still not lawyer-reviewed**: the audit itself recommends a legal professional look at the photo consent form (9.4-A) and the parental confirmation flow (9.4-C) before they go live.
- [] **Ship the section 9.2 form changes in the same upload as the new `privacy.html`**. The policy describes an age question, a minimum age of 6, and a reminder-consent checkbox that the forms do not have yet. Publishing the policy without them makes it inaccurate.
- [] **Build the offline half** — the written photo consent form, the `Consent Records` folder, and the by-hand guardian confirmation reply (section 9.4). These are the HIGH-severity items; the HTML is the easy part.
- [] **September and October dates**. Sep 6, Sep 13, Sep 25, Oct 4 and Oct 11 are hardcoded in two places each. They go stale on their own.
- [] **Verify the Google Maps links**. Two of them are map *searches* rather than pinned locations — click each once to confirm it lands on the right building.
- [] **The Build program has no photo yet**. `programs.html` has a labelled placeholder where one goes after the first build meet.
- [] **Vienna Lu's photo and bio are blank**. `team.html` shows a "Photo to come" placeholder and "Bio to come." Swap in a portrait cropped to roughly 0.63 wide-to-tall (see "Change a team bio or photo" above), replace the `<p class="bio-pending">`, and drop the `empty` class off the `.founder-photo` div.

8. Build decisions worth knowing

Things that were changed deliberately during the rebuild. If something looks "wrong" compared to the mockups, check here first — it was probably on purpose.

The hero does not lock your scroll. The mockup pinned the page with `body{overflow:hidden}` while the hero photo expanded. That doesn't actually stop the page scrolling (the scroll container is the `<html>` element, not `<body>`), and it trapped keyboard and screen-reader users with no way out. The hero is now a 260vh section with the photo `position:sticky` inside it — it expands as you scroll through, looks the same, and it is ordinary scrolling the whole way. It collapses to a static hero when "reduce motion" is on.

The logo is 256px, not 1254px. The original was a 740KB PNG rendering at 36×28 pixels, loaded on all 11 pages — about a quarter of the photos page's initial weight for a thumbnail. It is now 48KB. If you ever replace it, export it around 256px; do not drop a full-resolution export in.

Contrast was corrected against the mockup palette. See section 5. Short version: the light-mode gold is darker than the mockups', the muted/faint greys are stronger in both themes, and the hero foreground is pinned light. Every text pairing now clears the 4.5:1 WCAG AA minimum.

Keyboard focus is explicit. The glass pills are translucent, which swallowed the browser's default focus ring — tabbing through the forms showed nothing at all. There is now a gold `:focus-visible` outline. Don't remove it.

Gallery photos load lazily. Photos carry `data-src`, not `src`; `site.js` swaps them in when the gallery nears the viewport. On the Photos page that means 5 images load on arrival instead of 104. Keep using `data-src` when you add galleries.

September 2026 pass — piano spotlight, caption removal, thinner cursor trail. Three changes made after the initial rebuild: - The homepage CTA band's "MUSIC FOR EVERYONE" outlined-text headline was replaced with the piano spotlight illustration described in section 5. The old SVG text/mask markup, its `.hovertext` / `.ht-base` CSS and the `hyDash`

keyframe are gone; `initHoverText()` in `site.js` was replaced by `initPianoSpotlight()` . - Every gallery card's on-card caption (`.cap`) and the dark bottom veil (`.veil`) that existed to keep that caption legible were removed, on both `index.html` 's and `photos.html` 's carousels — cards now show only the clean photo. The full-screen lightbox is untouched and still reads `data-cat` / `data-title` / `data-body` from the card, so keep filling those in when you add a gallery (section 3). - The fluid cursor trail (`initCursor()` in `site.js`) was retuned smaller and softer — it had drifted thick and blobby. If a future edit makes it feel heavy again, the knobs are the particle radius (`r: 16 + Math.min(20, d * 0.55)`), the per-frame opacity (`0.13`), and the fade-out rate of the trail (`rgba(0,0,0,0.13)` in the clear step) — smaller radius and lower opacity read as thinner and lighter.

Source archives. This site was built from three archives — the old live site, the Claude Design mockup handoff, and a Google Drive export of the August 30 photos. Everything from all three that the site uses is already in this folder, so they were cleared out afterwards. Two things existed only in those archives and are *not* here: the old homepage's `piano-film.mp4` / `.webm` (the redesign has no film section), and the original full-resolution August 30 photos (this folder has them resized to 1600px, which is what the site should serve anyway). If you ever need either, they are in the Trash or can be re-exported from Google Drive.

9. Legal audit fixes (September 2, 2026) — what changed, and what you still have to build

A three-pass legal review (**HarmonYouth Foundation — Legal Vulnerability Audit.pdf**, in the master folder) found **17 issues**: 6 HIGH, 8 MEDIUM, 3 LOW-MEDIUM, across Alberta PIPA, CASL, tort law and child-protection. The privacy policy has been rewritten to close all 17.

⚠ READ THIS BEFORE YOU PUBLISH ANYTHING. The new policy describes things the website does not do yet — an age question, a reminder-consent checkbox, a stated minimum age. Every one of them is spelled out in **9.2** with the exact markup to paste. **Ship 9.2 in the same upload as the new `privacy.html` , or the policy becomes a false statement**, which is worse than the gap it was written to fix. That is the whole point of issue 2.3 in the audit: do not promise what the site does not do.

Decisions already made and written into the policy — do not contradict them anywhere on the site:

Decision	Value
Privacy Officer	Adam Wu — harmonyyouthfoundation@gmail.com · (403) 926-6122
Minimum participation age	6 years old , and anyone under 18 needs guardian consent
"General area" field on the performer form	Kept , and now disclosed in the policy
Governing law	Alberta + the federal laws of Canada

9.1 Status of all 17 issues

POLICY = already fixed, nothing more to do. **SITE** = you must change the website (section 9.2 / 9.3). **OFFLINE** = paperwork or process, no code (section 9.4).

#	Issue	Severity	Status
1.1	Phone number omitted from policy	HIGH	POLICY §01
1.2	No named Privacy Officer	HIGH	POLICY §12 — Adam Wu
1.3	No breach notification procedure	HIGH	POLICY §10 — 72-hour commitment
1.4	CASL — no express email consent	HIGH	POLICY §06 + SITE 9.2-B, 9.2-E + OFFLINE 9.4-E
1.5	Cross-border transfer not disclosed	MED-HIGH	POLICY §07
1.6	Formspree retention gap	MEDIUM	POLICY §07, §09 + OFFLINE 9.4-D
2.1	Photo consent verbal only	HIGH	POLICY §03 + OFFLINE 9.4-A
2.2	Parental consent not verified	HIGH	POLICY §04 + OFFLINE 9.4-C
2.3	GoFundMe donor data misrepresented	MED-HIGH	POLICY §07
2.4	No limitation of liability	MEDIUM	POLICY §13
2.5	Certificate full-name use not disclosed	MEDIUM	POLICY §02
3.1	No minimum age / no age verification	HIGH	POLICY §04 + SITE 9.2-A, 9.2-C
3.2	Location data not disclosed	MEDIUM	POLICY §01
3.3	No retention policy for consent records	MEDIUM	POLICY §09 + OFFLINE 9.4-B
3.4	Withdrawal process undefined	MEDIUM	POLICY §05 — with 24h / 48h / 7d / 14d timelines
3.5	No governing law clause	MEDIUM	POLICY §14
3.6	Google Fonts IP collection	LOW-MED	POLICY §07, §08 — disclosed. SITE 9.3 removes it entirely

What already changed in the repo:

- `privacy.html` — rewritten. Was 10 numbered sections, **now 15**. Header line now carries "Privacy Officer: Adam Wu" and the phone number. Last-updated date is **September 2, 2026**.
- `HarmonYouth Foundation — Privacy Policy.pdf` (master folder, not the repo) — regenerated to match. Was 11 pages / 11 sections, **now 13 pages / 16 sections**. Same visual design as before.

The two documents say the same things; the PDF carries the field-by-field form tables and the HTML is the shorter plain-language version. **If you change one, change the other the same day** — the policy itself now promises that.

9.2 SITE — the form changes the policy depends on

All in `get-involved.html`, `styles.css` and `site.js`. Roughly 45 minutes of paste-and-check. The three forms are `#volunteerForm` (performer), `#makerForm` (build) and `#helpForm` (everything else).

A. The age question — all three forms

The policy says "Every sign-up form asks whether the person filling it in is under 18." Paste this block **immediately before the Parent or guardian email field** in each of the three forms, inside the `<div class="fields">` grid:

```
<div class="field-full">
  <span class="lbl">Are you under 18 years old?</span>
  <div class="choice-row">
    <label class="choice"><input type="radio" name="under_18" value="Yes" required><span>Yes</span></label>
    <label class="choice"><input type="radio" name="under_18" value="No" required><span>No</span></label>
  </div>
  <span class="hint">Participants must be at least 6 years old. Anyone under 18 needs a parent or guardian to confirm consent before taking part.</span>
</div>
```

Then, on the **guardian email pair in all three forms**, swap the hard-coded `required` for `data-guardian-required` so the JS in **9.2-E** can turn it on only when the answer is Yes:

Form	Fields to change	Before	After
#volunteerForm	#vparentemail , #vparentemail2	required	data-guardian-required
#makerForm	#mparentemail , #mparentemail2	required	data-guardian-required
#helpForm	#aparentemail , #aparentemail2	(neither had it)	data-guardian-required

That last row is the one that quietly fixes the biggest gap: `#helpForm` 's guardian fields are optional today **on purpose**, because care homes, media and partners use that form too (see section 4). With the gate, they stay optional for the adults and become mandatory the moment someone says they are under 18 — you keep the reason the field was optional and lose the hole.

B. The CASL reminder-consent checkbox — all three forms

The policy says the box exists, is never pre-ticked, and that ticking it is optional. Paste this as the **last item inside <div class="fields">** in each of the three forms:

```
<div class="field-full">
  <label class="consent">
    <input type="checkbox" name="email_reminders_consent" data-consent>
    <span>I agree to receive email reminders from HarmonYouth Foundation before upcoming performances. I can unsubscribe at any time.</span>
  </label>
  <span class="hint">Optional. Leaving this un-ticked does not affect your sign-up, your place on the roster, or your volunteer hours.</span>
</div>
```

Do not add checked . CASL express consent requires the person to tick it themselves; a pre-ticked box is not consent and is exactly what the audit's issue 1.4 is about.

C. The minimum-age notice on the page

Issue 3.1 wants the age stated on the form itself, not only in the policy. Add one `.perk` line under each form's intro — the same component the volunteer-hours line already uses, so it needs no new CSS:

```
<div class="perk">
  <svg width="15" height="15" viewBox="0 0 24 24" fill="none"><circle cx="12" cy="12" r="9" stroke="currentColor"
stroke-width="1.6"/><path d="M12 7.5v5.5M12 16.2v.6" stroke="currentColor" stroke-width="1.7" stroke-
linecap="round"/></svg>
  <span>Participants must be at least 6 years old. Anyone under 18 needs a parent or guardian to confirm consent
– we email them before adding a student to the roster.</span>
</div>
```

D. CSS for the two new controls

Nothing in `styles.css` styles a checkbox or a radio yet, and `.fields label` is a hard uppercase 11px block rule that will wreck an inline choice label if you don't override it. Paste this block right after the `.fs-error` rule (currently line 442):

```
/* --- age gate + CASL consent controls (added Sept 2026, legal audit) --- */
.fields .lbl{display:block;font-family:'Inter',sans-serif;font-size:11px;font-weight:700;letter-
spacing:.12em;text-transform:uppercase;color:var(--faint);margin-bottom:9px}
.choice-row{display:flex;gap:10px;flex-wrap:wrap}
.fields label.choice,.fields label.consent{margin:0;padding:13px 16px;border:1px solid var(--line);border-
radius:12px;background:var(--panel);cursor:pointer;
  font-family:'Open Sans',sans-serif;font-weight:400;letter-spacing:0;text-transform:none;color:var(--
text);transition:border-color .25s ease;background .25s ease}
.fields label.choice{display:inline-flex;align-items:center;gap:9px;font-size:14.5px}
.fields label.consent{display:flex;align-items:flex-start;gap:11px;font-size:14px;line-height:1.6;color:var(--
muted)}
.fields label.choice input,.fields label.consent input{width:17px;height:17px;flex:0 0 auto;padding:0;accent-
color:var(--accent)}
.fields label.consent input{margin-top:2px}
.fields label.choice:focus-within,.fields label.consent:focus-within{border-color:var(--accent)}
.fields label.choice:has(input:checked),.fields label.consent:has(input:checked){border-color:var(--
accent);background:var(--panel2)}
```

`accent-color` paints the tick and the dot in HarmonYouth gold in both themes. `:has()` is the selected-state highlight; where it isn't supported the control still works, it just doesn't light up.

Then bump the cache-buster. `styles.css` and `site.js` are linked as `?v=2` in all 11 pages — find-and-replace `?v=2` → `?v=3` across every `.html` file, or people keep the old CSS and the new controls render unstyled. Section 2 covers this.

E. `site.js` — the age gate and the consent timestamp

Two additions inside `initForms()` (around line 641).

1. The age gate. Add this function inside `initForms`, next to `checkConfirm`:

```
// Under-18 answer decides whether the guardian email pair is required.
// Fields carry data-guardian-required instead of a hard-coded required attribute.
function initMinorGate(form) {
  var radios = $('input[name="under_18"]', form);
  var guardian = $('[data-guardian-required]', form);
  if (!radios.length || !guardian.length) return;
  function sync() {
    var minor = radios.some(function (r) { return r.checked && r.value === 'Yes'; });
    guardian.forEach(function (el) { el.required = minor; });
  }
  radios.forEach(function (r) { r.addEventListener('change', sync); });
  sync();
}
```

and call it in the `forms.forEach` loop, on the line above `form.addEventListener('submit', ...)`:

```
forms.forEach(function (form) {
  initMinorGate(form);
  form.addEventListener('submit', function (e) {
```

2. The consent record. An un-ticked checkbox sends **nothing at all** in a `FormData`, so "they didn't consent" and "the field doesn't exist" arrive at Formspreet looking identical — useless as a CASL record. Stamp it explicitly. In the submit handler, immediately after `var data = new FormData(form);`:

```
// CASL: record consent explicitly either way, with the date it was given.
$('input[type="checkbox"][data-consent]', form).forEach(function (cb) {
  data.set(cb.name, cb.checked
    ? 'YES — consented ' + new Date().toISOString()
    : 'No — did not opt in');
});
```

Now every submission email carries a line you can file, which is the record the policy promises in §06 and the audit asks for in issue 1.4 step 2.

Nothing else in the form pipeline needs touching. New named fields ride along in the `FormData` automatically, the shared `FORM_ID` is unchanged, and `SUCCESS_CONTENT` is unchanged.

Test before you upload: on each of the three forms — (1) tick **No** and submit with the guardian fields empty → it should send; (2) tick **Yes** and submit with them empty → the browser should block it and focus the guardian field; (3) submit once with the consent box ticked and once without, and check both emails land with a readable `email_reminders_consent` line.

9.3 SITE — self-host the fonts (optional, closes issue 3.6 completely)

Right now every page load on every page sends the visitor's IP address to Google, because `fonts.googleapis.com` is linked in the `<head>` of all 11 files. The policy discloses this, so you are compliant either way — but the audit's preferred fix is to make the disclosure unnecessary. ~30 minutes, and the site gets slightly faster:

1. Download **Inter** (300, 400, 500, 600, 700) and **Open Sans** (400, 500, 600) as `.woff2` from fonts.google.com and put them in the site folder.
2. Add `@font-face` blocks at the top of `styles.css` pointing at the local files, with `font-display:swap`.
3. Delete these three lines from the `<head>` of all 11 **.html files**: `html <link rel="preconnect" href="https://fonts.googleapis.com"> <link rel="preconnect" href="https://fonts.gstatic.com" crossorigin> <link href="https://fonts.googleapis.com/css2?family=Inter:wght@300;400;500;600;700&family=Open+Sans:wght@400;500;600&display=swap" rel="stylesheet">`
4. Then edit the policy: **§07 drop the Google Fonts row, §08 drop the "Fonts are the one external request" bullet**. Both documents. If you skip this step the policy is describing a request the site no longer makes.

9.4 OFFLINE — the paperwork, which no amount of HTML fixes

These are the audit's HIGH-risk items, and they are the ones that actually decide a lawsuit. The policy now states that HarmonYouth does all of them, so they have to be true.

A. Written photo consent form (issue 2.1 — HIGH). One page. Must carry: the date and venue, a description of where photos get published (this website and Instagram), a **YES I consent** box and a separate **NO I do not consent** box, and a signature line with a printed name. Then: - Each **care home** signs a blanket consent before you photograph there. Residents who opt out get named on that form and are not photographed. - Each **performer** — or their guardian if under 18 — signs before their first show. It covers later shows too, until withdrawn. - Keep a blank stack in the gig bag. Signed forms are kept **five years minimum**.

B. The Consent Records folder (issue 3.3 — MEDIUM). A Google Drive folder called `Consent Records`, sub-folded by year. Signed forms go in as scans or photos; guardian email confirmations go in a dedicated Gmail label. Calendar reminder every January to delete anything past five years. Without this folder, section 9.4-A is just paper in a bag, and a court can draw an adverse inference from records you should have kept and didn't.

C. Parental confirmation flow (issue 2.2 — HIGH, and the hard one). The policy says a student under 18 joins the roster *only after* a guardian clicks a confirmation link. **A static site on GitHub Pages cannot send that email** — there is no server. Until it is built, do it by hand: when a performer sign-up arrives with `under_18 = Yes`, reply to the guardian address from the org Gmail with the student's name and instrument, what HarmonYouth does, and two clear replies — *I CONFIRM CONSENT* and *REMOVE MY CHILD — I DID NOT AUTHORIZE THIS*. File the reply under the Gmail label from 9.4-B and only then add the student. To automate it later: Formspre's paid tier does autoresponders, or a Google Apps Script on the org Gmail can watch for the subject line and send the template. **This is the single biggest remaining gap on the list — the manual version is fine, but it has to actually happen every time.**

D. Formspre deletion workflow (issue 1.6 — MEDIUM). Log into formspre.io with the org Gmail and check whether your plan lets you delete individual submissions. If it does, deleting there becomes step two of every deletion request, right after clearing Drive and Gmail. If it doesn't, the policy already says so honestly in §07 — but check, because the honest wording is a fallback, not the goal.

E. What every reminder email must contain (issue 1.4 — HIGH). CASL requires all three, every time: sender name **HarmonYouth Foundation**; a mailing address or phone — **Calgary, AB · (403) 926-6122**; and a **working** unsubscribe link. Put them in the email template once. Also keep the opt-in spreadsheet: email address, date consented, which form — the `email_reminders_consent` line from 9.2-E gives you all three, you just have to copy it across.

F. Keep a private breach note. §10 of the policy commits to notifying affected people within 72 hours and the Alberta OIPC where required, and names the Privacy Officer as responsible. Write down — even just a doc in Drive — who checks what, and what the first three phone calls are. You do not want to be designing that process on the day.

9.5 Things that must now stay consistent

Add these to the list in section 3's "Change the volunteer hour wording" habit — same trap, same fix.

Claim	Where it appears	Rule
Minimum age 6	policy §04 (both docs), the three <code>.perk</code> lines from 9.2-C, the age-question hint from 9.2-A	Change one, change all five
Privacy Officer Adam Wu	<code>privacy.html</code> header line + §12; PDF cover table + §13	Policy promises an update within one week of the officer changing
Withdrawal timelines 24h / 48h / 7d / 14d	policy §05 (both docs)	These are commitments, not aspirations — do not soften them in one doc only
Breach notice 72 hours	policy §10 (both docs)	Same
Consent records 5 years	policy §03, §09 (both docs)	Must match what the Drive folder in 9.4-B actually does
Form fields ↔ policy §01	any new field on any form	The policy promises it is updated the same day, before the new form goes live. This is now a written commitment, so it is the one rule in this guide you genuinely cannot let slide

10. Design audit notes (September 2026) — not yet applied

A design review was run against the site's anti-generic-design principles. Nothing below has been changed in the code — these are recommendations for whoever picks this up next.

What's working: the hero (a real performance photo expanding on scroll, not a generic gradient-blur headline), the piano spotlight (section 5 — genuinely grounded in the subject), and the liquid-glass buttons (a bespoke, consistently-executed micro-interaction).

What reads as templated: - [] **The "Get involved" FAQ accordion** (five questions, numbered `01` – `05`) is a stock SaaS-FAQ pattern — numbered dividers, plus/x toggle, thin question text — and the numbering doesn't mean anything: the five questions aren't a sequence. Compare to the "How a show runs" `01/02/03` cards earlier on the same page, where the numbering *is* real (Booking → Lineup → After). Likely fix: drop the numbers from the FAQ, keep them on the process cards. - [] **Typography has no distinct personality.** Inter (headlines + UI) + Open Sans (body) is one of the most common pairings in web design generally — safe, but not specific to HarmonYouth. - [] **Dark mode's structure** — near-black background (`#07080A`) plus exactly one accent colour (`--accent:#C9A15A`) — matches a well-known generic-AI-design formula (near-black + single bright accent), independent of the specific gold hue chosen. See the palette proposal below for a low-risk fix. - [] **Motion is scattered rather than one signature moment.** Counted running at once: hero scroll-lock, sitewide fluid cursor trail, piano spotlight, carousel blur-up, accordion expand, scroll progress bar, dot rail. Worth considering whether the ambient chrome (progress bar, dot rail, cursor trail) should recede so the hero's scroll expansion reads as *the* signature moment rather than one effect among several.

Proposed palette fix — "Concert Red" as a second accent. Rather than repainting the palette, pull a second colour from imagery already on the site: the red velvet seats and chandelier in the piano illustration (section 5). Adding it as a genuine second accent breaks the single-accent-on-near-black formula without touching the gold, the logo, or any already-validated contrast pairing.

```
#8C2F38 (base)
├ 300 #CB7881 → text on dark bg:      6.24:1 (AA)
├ 500 #8C2F38 → filled badge, light text: 7.52:1 dark theme / 8.14:1 light theme (AA/AAA)
└ 600 #6E232B → text on light bg:      9.76:1 (AAA)
```

Suggested use — small and deliberate, not a repaint: give the `talks` show-status pill (currently reuses the gold `--accent-soft`) its own red, so "In talks" reads differently from "Recruiting" at a glance. Keep it out of primary buttons/CTAs — gold stays the dominant brand colour, red is the accent-to-the-accent, per the 60-30-10 rule.

Current palette accessibility (validated independently, September 2026): every text/background and text/button pairing in both themes clears WCAG AA (4.5:1). Only the two primary text colours against their backgrounds clear AAA (7:1) — the muted/faint text tokens and the gold accent land in the 4.5–6.9:1 range in both themes, same conclusion as section 5's contrast note, now re-verified with `check_contrast.py`.

11. Quick reference

Thing	Where it lives
Upcoming shows list	<code>performances.html</code> → <code>data-view="list"</code>
Performance calendar data	<code>site.js</code> → <code>PERFORMANCE_CALENDAR</code>
Build meet calendar data	<code>site.js</code> → <code>BUILD_MEET_CALENDAR</code>
Calendar rendering	<code>site.js</code> → <code>initCalendar()</code>
Photo galleries	<code>photos.html</code> → <code>.carousel-block</code>
Piano spotlight (homepage CTA band)	<code>index.html</code> → <code>.piano-hover</code> ; <code>site.js</code> → <code>initPianoSpotlight()</code> ; images <code>piano-outline.jpg</code> / <code>piano-color.jpg</code>
Fluid cursor trail	<code>site.js</code> → <code>initCursor()</code>
Homepage hero behaviour	<code>site.js</code> → <code>initHeroLock()</code> ; <code>styles.css</code> → <code>.hero-scene</code> / <code>.hero</code>
Forms	<code>get-involved.html</code> ; wiring in <code>site.js</code> → <code>initForms()</code>
Formspree form ID	<code>site.js</code> → <code>FORM_ID</code>
Confirmation screen wording	<code>site.js</code> → <code>SUCCESS_CONTENT</code>
Search keywords and destinations	<code>site.js</code> → <code>ROUTES</code>
Rotating search placeholders	<code>site.js</code> → <code>PLACEHOLDERS</code>
Menu rows	the <code>menu-links</code> block — repeated in all 11 <code>.html</code> files
Team bios	<code>team.html</code>
Vienna Lu's role card	<code>team.html</code> → <code>.recruit</code>
Contact info	footer of every page
Privacy policy text	<code>privacy.html</code> → <code>.numbered</code> ; PDF in the master folder — keep the two in step
Privacy Officer name	<code>privacy.html</code> header line + §12; PDF cover table + §13
Legal audit + what's still open	this guide, section 9; <code>HarmonYouth Foundation – Legal Vulnerability Audit.pdf</code>
Age gate / consent checkbox markup	this guide, section 9.2 — not in the code yet
All colours, fonts, glass recipe	<code>styles.css</code> → <code>:root</code> and <code>[data-hy-theme="light"]</code>
All interactivity	<code>site.js</code>
